

## Junior Engineer in 5G Product Development

Power the 4<sup>th</sup> industrial revolution with 5G

Join us in the Global Technology Center Ulm where we create the software for the next generation of mobile communication that drives the automation of everything, the cloud and the Internet of Things.

We count on versatile and passionate engineers to tackle new challenges as we continue to push technology forward. We are looking for highly motivated people with a solid understanding of software engineering or mobile communication to become our experts.

You will work in an international environment, having the opportunity to take part in the development of new features and projects as our fast-paced business grows and evolves. You will start as a member of an agile, cross-functional scrum team either in specification, software development or testing area depending on your interests and skills.

### Your tasks:

- Analysis and specification of 5G base station features
- Software architecture and component design
- Software development on a Linux based embedded system
- Feature integration on 5G base station equipment
- Test automation and Continuous Integration

### Your qualifications:

- BSc, MSc or a PhD in Engineering, Telecommunication, Computer Science, Software Technology or equivalent
- Good communication in English (both written and spoken) and at least basic communication in German (level A2)
- Knowledge of C/C++ or Python programming
- Background in mobile communication technologies and protocol stacks
- You are always eager to learn more, have a good technical understanding and enjoy working as part of a team in an international environment

You will work in our Technology Center in Ulm. We offer a supportive and innovative work environment, space for individual thinking and creativity, encouraging atmosphere, flexible working time with home office opportunity, competence development and career opportunities, sports and leisure time activities.
